Introduction 1

PART I.

THE EMERGENCE OF A COGNITIVE ELITE

1 Cognitive Class and Education, 1900–1990 29

2 Cognitive Partitioning by Occupation 51

3 The Economic Pressure to Partition 63

4 Steeper Ladders, Narrower Gates 91

PART II.

COGNITIVE CLASSES AND SOCIAL BEHAVIOR

5 Poverty 127

6 Schooling 143

7 Unemployment, Idleness, and Injury 155

8 Family Matters	167
9 Welfare Dependency	191
10 Parenting	203
11 Crime	235
12 Civility and Citizenship	253

**PART III.
THE NATIONAL CONTEXT**

13 Ethnic Differences in Cognitive Ability	269
14 Ethnic Inequalities in Relation to IQ	317
15 The Demography of Intelligence	341
16 Social Behavior and the Prevalence of Low Cognitive Ability	369

**PART IV.
LIVING TOGETHER**

17 Raising Cognitive Ability	389
18 The Leveling of American Education	417
19 Affirmative Action in Higher Education	447
20 Affirmative Action in the Workplace	479
21 The Way We Are Headed	509
22 A Place for Everyone	527

APPENDIXES

1 Statistics for People Who Are Sure They Can't Learn Statistics	553
2 Technical Issues Regarding the National Longitudinal Survey of Youth	569
3 Technical Issues Regarding the Armed Forces Qualification Test as a Measure of IQ	579
4 Regression Analyses from Part II	593

5 Supplemental Material for Chapter 13	625
6 Regression Analyses from Chapter 14	645
7 The Evolution of Affirmative Action in the Workplace	655
Notes	665
Bibliography	775
Index	833

In the twentieth century, the prevalence of the college degree goes from one in fifty to a third of the population. 32

At mid-century, America abruptly becomes more efficient in getting the top students to college. 34

Between the 1920s and the 1960s, college attendance becomes more closely pegged to IQ. 39

Cognitive sorting continues from the time that students enter college to the time they get a degree. 37

Cognitive stratification in colleges by 1961. 40

Americans with and without a college education, as of 1990. 45

Americans with and without a college education, as of 1990. 46

The top IQ decile becomes rapidly more concentrated in high-IQ professions from 1940 onward. 50

In fifty years, the education of the typical CEO increases from high school to graduate school. 59

The variation among individuals that lies behind a significant correlation coefficient. 65

The self-advantages of turning by test score. 83

Engineers' salaries as an example of how intelligence became more valuable in the 1950s. 93

The high-IQ occupations also are well-paid occupations. 102

Defining the cognitive class. 121

Demotic progress against poverty, from World War II through the 1960s, together with what has happened since then. 124

The comparative roles of IQ and parental SES in determining whether young white adults are below the poverty line. 134

In the white high school sample, high IQ makes a difference in avoiding poverty; in the college sample, hardly anyone was poor. 136

The role of the mother's IQ in determining which white children are poor. 138.
