ENTREPRENEURS IN HIGH TECHNOLOGY

LESSONS FROM MIT AND BEYOND

CONTENTS

1. **High-Technology Entrepreneurs, 3**
Issues involved in founding and building technological firms via a series of short personalized histories of several entrepreneurs, including both success and failure. Preview of the book.
2. **An Environment for Entrepreneurs, 31**
Influences of the Greater Boston and especially the MIT environment on the formation of new companies.
3. **The Makings of an Entrepreneur, 47**
A synopsis of the classical writings on entrepreneurship, providing the base for presentation of extensive analyses on the family background, education, age, and work experience of several hundred technological entrepreneurs.
4. **The Technological Base of the New Enterprise, 100**
The extent of dependence of initial company technology on MIT labs and academic departments and other entrepreneurial source organizations. Factors affecting technology transfer to the new firm.
5. **The Financial Base of the New Enterprise, 124**
The stages of growth and development of the technological firm, the associated capital requirements, and the likelihood of various types of investors to provide funding. Research analyses of the sources and determinants of initial capital funding of the high-technology company.
6. **Evolving Toward Product and Market-Orientation, 160**
Signs and causes of transformation of the technology-based firm during its first few years of existence. Indications of the movement toward products, and away from consulting and contract R&D, and toward a market orientation.
7. **Finding Additional Financing, 188**
The extent of and influences on subsequent financing of the young firm, including the role of business plans and the decision-making processes of venture capital organizations.

8. Going Public, 217
In-depth analyses of decisions by technological companies to go public, their search for underwriters, influences on underwriter actions, the process and consequences of becoming a public firm.
 9. Survival Versus Success, 245
Measures of success for the technological firm. The relations with success of characteristics of the entrepreneurs and the enterprises, their technological base, their funding, their market orientation, and their managerial orientation.
 10. Product Strategy and Corporate Success, 281
The role of new product strategy in achieving growth and overall success for the high-technology company, the importance of technological and market focus.
 11. Super-Success, 309
Strategic factors affecting the super-successful technology-based company. The need for completing the transformation toward market orientation.
 12. Technological Entrepreneurship: Birth, Growth, and Success, 339
A synthesis of the book. What matters in generating technological entrepreneurs and their new enterprises? What determines their growth and success? The future of technological entrepreneurship.
- Appendix - A Quarter Century of Research, 359
The five tracks of a comprehensive research program on technological entrepreneurship, describing over forty separate but integrated studies that form the basis for the book.
- Index of Founders and Firms, 377
- Subject Index, 381
