

*Astronomy of
Islamic Times for
the Twenty-first
Century*

Mohammad Ilyas

Contents

List of Figures	viii
List of Tables	ix
Preface	x
Part I <i>Basis of Islamic Times</i>	1
1 <i>Development of Astronomy and Concept of Islamic Times</i>	3
The rise and fall of astronomy under Islam	3
The role of Islamic times in the development of astronomy	7
2 <i>Time, Division of the Day and Early Time Clocks</i>	10
The earth's rotation and day as the basic time unit	10
The larger time units: adding the days into months and years	13
The beginning of time units	16
Dividing the day, and the measure of time	22
3 <i>The Need for Fixed Positions and the Development of Ilm al-Miqat and Qiblah Tables</i>	26
Islamic times in conventional (theological) and astronomical terminologies	26
General basis of computations for Islamic times	31
Early Islamic tables and some modern efforts	33
4 <i>Atmospheric and Optical Physics relevant to Islamic Times</i>	38
The earth's atmosphere	39
Atmospheric refraction and twilight at the earth's surface	40
Effect of altitude on astronomical phenomena	46
The human eye as a detector	52
5 <i>Current Problems and Future Directions</i>	55
Astrophysical variables and the criticality of certain Islamic times	55
Urgent scientific problems	58
Problems needing religious consideration	60
Related matters and future directions	66
Part II <i>Global Atlas of Islamic Times</i>	69
<i>Introduction</i>	71
Instructions on usage and technical information	71
Example	74
<i>Global Tables</i>	77
Northern latitudes (0–70°N)	77
Southern latitudes (0–70°S)	165
Index	253

List of Figures

2.1a	Relative position of the earth during its annual cycle round the sun and the four seasons	11
2.1b	The celestial sphere	11
2.1c	The elliptical orbit of the earth and the changing earth-sun distance through the seasonal year	12
2.2a	The seasonal and year-to-year changes in the earth's rotation rate	12
2.2b	The long-term trend in the change of length-of-day	12
2.2c	The lengthening of the day due to gradual slowing down of earth's speed	13
2.3	Progress of time-measuring clocks over the past seven centuries (a schematic presentation after Whitrow)	23
3.1	The cyclic distribution of the various prayer-time instants during a day period	29
3.2	Geometrical determination of the direction between two geographical places (or direction to Makkah)	31
3.3	The hour angle (H.A.), right ascension (R.A.) and declination co-ordinate system	32
3.4	Schematic representation of true and calendrical solar cycles	33
4.1a	Composition of the earth's atmosphere	38
4.1b	Temperature variation in the earth's atmosphere	39
4.2	Geometry of atmospheric refraction	40
4.3	The atmospheric refraction effect	41
4.4a	Geometry of astronomical refraction	43
4.4b	Approximation of the atmospheric refraction phenomenon	43
4.5	Variation of the lowest illuminated height with solar zenith angle	45
4.6	Average twilight illumination with solar depression (horizontal plane)	46
4.7	Geometry of the angle of dip	47
4.8	The decreasing brightness of the night sky as a function of solar depression and altitude	52
4.9	Spectral sensitivity of average human eye under normal and dark-adapted conditions	53
4.10	Dependence of visual sensitivity of human eye on dark adaptation	53
5.1	The difference in brightness of the evening sky in the zenith and on the western horizon	56
5.2a	Year-to-year variations of sunrise	61
5.2b	Year-to-year variations of <i>Asr-i-Hanafi</i>	62
5.2c	Year-to-year variations of twilight	63
II.1	Time, Standard	70

List of Tables

1.1	Astronomical activity of Muslims	7
1.2	Diverse astronomical observations during the Islamic development	9
2.1	The months in three Roman calendars and the world calendar	18
2.2	Some concordances on A.U.C. & A.D./B.C.	20
3.1	The cyclic distribution of the various prayer's times instants during a day period	27
3.2	Theological defining system of various prayers	28
3.3	Basic astronomical defining system	30
4.1a	Dip of the horizon and range of vision	48
4.1b	Dip of the horizon at great heights	49
4.1c	Geometric depression of the centre of the sun at the surface of the earth	50
4.2a	Altitude correction to rising and setting	50
4.2b	Declination of the sun	51
4.3	Summary of factors important to Islamic times	54
5.1	Time change for different solar depressions	57
5.2	Prayer times, entries for 20 May 1985	59
II.1	Conversion of longitude from degrees to hours and minutes	72
II.2	Average correction for height of a place	73
II.3	Date versus day of the year for regular and leap years	73
II.4	Time correction for the change in solar zenith angle	75
