TABLE OF CONTENTS

TABLE OF FIGURESxix

PREFACE xxxv

PART I OVERVIEW OF THE COMMUNICATION FACILITIES..... 1

1.0 BASIC COMMUNICATION NETWORKS..... 3

 1.1 EVOLVING TELEPHONE NETWORKS..... 3

 1.2 EXISTING TELEPHONE ENVIRONMENTS..... 6

 1.3 TRUNK NETWORKS..... 8

 1.4 COAXIAL CABLES IN NETWORKS..... 9

 1.5 CARRIER CONCEPTS..... 12

 1.5.1 Analog Carriers..... 12

 1.5.2 Digital Carriers..... 14

 1.5.3 Twisted Wire-Pair Digital Carriers..... 18

 1.6 CENTRAL OFFICE HIERARCHY..... 19

 1.6.1 Local Central Offices or End Office..... 20

 1.6.2 Toll Centers..... 21

 1.6.3 Primary Centers..... 21

 1.6.4 Sectional Centers..... 22

 1.6.5 Regional Centers..... 22

 1.7 NODES WITHIN THE NETWORK..... 22

 1.8 LINKS WITHIN THE NETWORK..... 24

 1.9 NEW ARCHITECTURES OF END AND INTERMEDIATE OFFICES..... 24

 1.10 REFERENCES..... 30

2.0 FM TECHNIQUES IN EXISTING NETWORKS	31
2.1 GENERIC CONCEPTS	32
2.2 MULTIPLEXING OF FM SIGNALS	32
2.3 HIGH FREQUENCY FM NETWORK LINKS	35
2.4 RADIO LINKS	36
2.4.1 The 2 GHz Band	37
2.4.2 The 4 GHz Band	37
2.4.3 The 6 GHz Band	38
2.4.4 The 11 GHz Band	39
2.4.5 The 18 GHz Band	40
2.4.6 Digital Microwave Radio Links	40
2.5 COAXIAL LINKS	43
2.5.1 General Framework of Coaxial Systems	43
2.5.2 Transmission Aspects	43
2.5.3 Undersea Cable Carriers	45
2.6 SATELLITE LINKS	46
2.6.1 General Concepts	46
2.6.2 Spectral Groups and Bands of Satellite Links	48
2.6.3 Interruptions in Satellite Communications	49
2.6.4 Impairments in Satellite Communications	50
2.7 ANALOG CHANNEL BANKS	51
2.7.1 The A6 Channel Bank	51
2.7.2 The Group Bank	53
2.7.3 The Supergroup Bank	53
2.7.4 The Mastergroup Bank	55
2.7.5 The Jumbogroup Bank (Multiplexer)	58
2.8 CONCLUSIONS	60
2.9 REFERENCES	61
3.0 VIDEO AND TV ENVIRONMENT	63
3.1 GENERAL CONCEPTS	63
3.2 TV NETWORKS	68
3.3 INTRACITY TV NETWORKS	69
3.4 INTERCITY TV NETWORKS	69
3.5 FEATURES OF EXISTING TV SYSTEMS	72
3.5.1 Cable Frequency Allocation	72
3.5.2 CATV Network Topology	73
3.5.3 CATV Coaxial Cables	75
3.5.4 CATV Signal Quality	75
3.5.5 Digital Capabilities of CATV Systems	76
3.6 Hybrid Fiber Coax (HFC) Systems	76
3.7 CONCLUSIONS	82
3.8 REFERENCES	83

4.0 CURRENT DIGITAL NETWORKS	85
4.1 MAJOR ARCHITECTURES.....	85
4.2 ISDN AND DIGITAL TELEPHONE ENVIRONMENTS	89
4.3 CAPACITY OF EXISTING TELEPHONE NETWORK FOR ISDN	93
4.3.1 Transmission Aspects.....	93
4.3.2 Switching Aspects.....	94
4.4 DIGITAL FEATURES OF THE EXISTING TELEPHONE NETWORKS	95
4.4.1 Data Flow to/from the Central Office	97
4.4.1.1 Lower Data Rates.....	98
4.4.1.2 The 56 kbps Data	99
4.4.2 Centralized Switching of Digital Channels	100
4.4.3 Electronic Toll Switching and Digital Channels	101
4.5 CHANNEL BANK FUNCTIONS	104
4.6 D CHANNEL BANKS IN THE UNITED STATES.....	106
4.7 SUBRATES AND DIGITAL CHANNEL BANKS	109
4.8 THE ROLE OF NEWER ELECTRONIC SWITCHES	111
4.9 FAST PACKET TECHNOLOGIES.....	111
4.10 IMPACT OF SONET AND ATM.....	118
4.11 REFERENCES.....	122
 PART II THE METALLIC MEDIA: THE PHYSICAL ENVIRONMENT.....	 123
5.0 SUBSCRIBER LOOPS.....	125
5.1 WIRE-PAIRS.....	127
5.1.1 Open Wire-Pairs.....	128
5.1.2 Twisted Wire-Pairs	128
5.1.3 Unshielded Twisted Wire-Pairs (UTP)	130
5.1.4 Shielded Twisted Pairs (STP)	132
5.2 TELEPHONE SUBSCRIBER LINES.....	132
5.3 DIGITAL SUBSCRIBER LINES (DSL).....	135
5.3.1 Wire-Pairs as High-Speed Data Services	135
5.3.1.1 Historical Perspective.....	136
5.3.1.2 Twisted Wire-Pairs for BRISDN	137
5.3.1.3 Recent Perspective	138
5.3.2 General Topology of the Subscriber Loop Plant.....	138
5.3.3 Electrical Characteristics of Loops (1973 Loop Survey).....	140
5.4 1983 LOOP SURVEY FINDINGS.....	146
5.4.1 Loop Environments	146
5.4.2 1983 Loop Survey (Physical Characteristics)	148
5.4.3 1983 Loop Survey (Electrical Characteristics).....	151
5.5 CARRIER SERVING AREA (CSA) CONCEPTS.....	156
5.5.1 Wire-Pairs in the Carrier Serving Area.....	158

5.5.2 Physical Characteristics of CSA Loops	159
5.5.3 Electrical Characteristics of CSA Loops.....	160
5.5.4. PENETRATION OF T1 AND E1 SERVICES.....	165
5.6 The GTE Loop Environment.....	171
5.6.1 Other Loop Environments.....	172
5.6.2 The British Loop Environment.....	177
5.6.2.1 Physical Characteristics	177
5.6.2.2 Electrical Characteristics.....	179
5.6.3 HDSL in the United Kingdom Environments.....	184
5.7 SUMMARY OF ANSI AND ETSI LOOPS	185
5.7.1 ANSI Loop Topologies.....	186
5.7.2 ETSI Loop Topologies	192
5.8 RECENT ENHANCEMENT AND COMPETING STRATEGIES.....	195
5.9 PREMISES DISTRIBUTION SYSTEMS	197
5.10 REFERENCES.....	202
6.0 OPERATIONAL ENVIRONMENT FOR THE HDSL ...	205
6.1 UNITED STATES OVERVIEW	206
6.2 INDIVIDUAL LOOPS FOR HDSL APPLICATIONS.....	207
6.3 IMPAIRMENT FOR DATA TRANSMISSION.....	207
6.3.1 Impairments Resulting from Design Rules	208
6.3.2 Impairments Resulting from Environmental Conditions.....	212
6.3.3 Impairments Resulting from Electrical Coupling Effects.....	213
6.3.3.1 Impulse Noise	214
6.3.3.2 Crosstalk Interference	215
6.3.3.3 Line Imbalance.....	218
6.3.3.4 Metallic Noise.....	219
6.3.4 Basic Reasons for Noise within Systems.....	219
6.3.4.1 Thermal Noise.....	219
6.3.4.2 Shot Noise.....	221
6.3.4.3 Low-Frequency ($1/f$) Noise	221
6.3.4.4 Rayleigh Noise.....	222
6.3.4.5 Quantization Noise.....	223
6.3.4.6 Feed-Through Noise and Misalignment Noise	225
6.3.4.7 Idle Channel Noise	226
6.3.4.8 Impulse Noise	227
6.3.4.9 Intermodulation Noise.....	228
6.3.4.10 Device and Network Noise	228
6.3.4.11 Diode and Transistor Noise	228
6.3.5 Noise Contamination and Management.....	229
6.4 MODES OF TRANSMISSION FOR ISDN	230
6.4.1 Space Division Multiplexing	231
6.4.2 Frequency Division Multiplexing.....	231
6.4.3 Time Division (Compression) Multiplexing.....	233
6.4.4 Echo Cancellation	238

6.4.5 Adaptive Hybrid with AEC	240
6.4.5.1 Fixed Termination Hybrids	241
6.4.5.2 Adaptive Termination Hybrids	242
6.5 COMPONENT CONSIDERATIONS	244
6.5.1 Equalizers	244
6.5.1.1 Tapped Delay Line Devices	247
6.5.1.2 Practical Design Considerations	248
6.5.1.3 Numerical Design Optimization	249
6.5.1.4 A Case Study of the Equalizer Design	251
6.5.2 Echo Cancelers	251
6.5.2.1 Types of Echoes	251
6.5.2.2 EC Design Considerations and FIR Realization	253
6.5.2.3 General Considerations for Tapped Delay Line ECs	254
6.5.2.4 Performance Requirements of EC	257
6.5.3 Timing Recovery	258
6.5.4 Overall System Design Considerations	261
6.6 SYSTEM COMPONENTS AND THEIR LIMITS	261
6.7 CODING ALGORITHMS	262
6.7.1 Bit by Bit Codes	262
6.7.2 Block Codes	263
6.7.3 Bandwidth Efficient Codes	264
6.7.4 2B1Q and PSK Code Comparison for Typical Loops	264
6.8 REFERENCES	268

PART III THE METALLIC MEDIA: THE COMPUTATIONAL ENVIRONMENT 271

7.0 SIMULATION AND CAD ASPECTS	273
7.1 INTRODUCTION	273
7.2 SIMULATION ENVIRONMENTS	275
7.2.1 Analysis Aspects	276
7.2.1.1 ABCD Representation	277
7.2.1.2 Derivation of the Basic ABCD Matrix	278
7.3 LINE CHARACTERIZATIONS	289
7.4 TRANSFER FUNCTION OF THE LOOP	290
7.4.1 The Numerical Approximation	293
7.4.2 From Frequency Domain to Time Domain	293
7.4.2.1 The Rotation Factor	295
7.4.2.2 Decomposition of a Complex Fourier Transform	295
7.5 CONVENTIONAL FACILITIES	297
7.6 PROCESSING OF EYE DIAGRAMS	299
7.6.1 AMI and 2B1Q Line Codes in the Loop Plant	300
7.6.2 Eye Diagrams and Eye Statistics	301
7.6.2.1 Eye Diagrams and Line Code	301
7.6.3 Scatter Plots from Eye Statistics	307

7.6.3.1 AMI Code	307
7.6.3.2 Composite Plots for the 2B1Q Code	308
7.6.4 Discussion of the Algorithms and their Use.....	313
7.7 DESIGN CONSIDERATIONS FOR HDSL	314
7.8 REFERENCES.....	316
8.0 DATA BASES AND THEIR MANAGEMENT FOR DSL DESIGN STUDIES.....	319
8.1 INTRODUCTION	320
8.2 DATA BASES AND FILE MANAGEMENT.....	322
8.2.1 Permanent Data Bases.....	322
8.2.2 Loop and Component Data Bases	322
8.2.3 Loop Survey Data Bases	323
8.2.4 Carrier Serving Area Loop Data Base.....	323
8.2.5 Data Bases with Cable Characteristics.....	323
8.2.6 Impulse Noise/Crosstalk Data Bases.....	324
8.2.7 Preprocessing of Permanent Data Bases.....	324
8.3 PROGRAM DATA BASES.....	325
8.3.1 Functional Designation in Program Name.....	325
8.3.2 Chronological Classification.....	325
8.3.3 Physical/Logical Classification of Mass Media Storage.....	326
8.3.4 Documents and Data Bases	326
8.3.5 Scans of Documents on Data Bases	328
8.4 POST PROCESSING PROGRAM DATA BASES.....	328
8.5 GRAPHICAL OR PICTORIAL DATA BASES	329
8.6 INTERMEDIATE DATA BASES.....	330
8.7 INTERMEDIATE OPTIMIZATION	331
8.9 AI AND ES TECHNIQUES.....	331
8.10 CONCLUSIONS	333
8.11 REFERENCES.....	334
9.0 SIMULATION TECHNIQUES FOR THE QAM (2D) CODE	337
9.1 INTRODUCTION	338
9.2 CSA GUIDELINES AND THEIR REVIEW.....	338
9.3 SIMULATION SOFTWARE	341
9.3.1 The Basic Building Blocks.....	341
9.4 DATA MANAGEMENT ASPECTS.....	343
9.4.1 Loop Topologies and Cable Characteristics.....	343
9.4.2 Graphical or Pictorial Information	344
9.5 TYPICAL SIMULATION PROCEDURES AND RESULTS.....	345
9.6 SUMMARY OF RESULTS.....	351
9.7 DISCUSSION OF RESULTS	352

9.7.1 2B1Q Benchmark Performance	353
9.7.2 American Loops at BRISDN, H_0 , $2H_0$ Rates and PRISDN	354
9.7.3 QAM 16/64 Point Cluster Codes for PRISDN	356
9.7.3.1 Line Scatter Plots for SNR.....	357
9.7.3.2 Effect of the Bridged Tap Length.....	358
9.7.3.3 Effect of Slightly Different Equalization Strategy	359
9.7.4 North American CSA and European Environments.....	362
9.8 CODE SELECTION AND NEXT NOISE MARGINS (PERFECT TRANSCEIVERS).....	364
9.9 LINE CODE AND NEXT NOISE MARGINS.....	365
9.10 CONCLUSIONS.....	366
9.11 REFERENCES.....	367
10.0 COMPUTER BASED OPTIMIZATION TECHNIQUES FOR HDSL DESIGN	369
10.1 INTRODUCTION	370
10.2 SPECTRAL DOMAIN OPTIMIZATION APPROACH	370
10.3 TIME DOMAIN OPTIMIZATION APPROACH.....	371
10.4 OPTIMIZATION OF MATCHING CIRCUITS FOR CSA AND ETSI LOOPS.....	372
10.5 MAXIMIZATION OF CLUSTER SNRS FOR 2-D (CAP) CONSTELLATIONS.....	376
10.6 DISCUSSION OF RESULTS AND CONCLUSIONS.....	380
10.7 REFERENCES.....	381
PART IV SYSTEM PERFORMANCE FROM VERY LOW TO VERY HIGH RATES.....	383
11.0 DATA UP TO PRISDN RATES.....	385
11.1 SIMULATION AND NOT EXPERIMENTATION	386
11.2 DATA OVER ALL LOOPS SURVEYED	388
11.3 ALL LOOPS TO 12 KFT.	395
11.4 CSA LOOPS	397
11.5 CODING OPTIONS AT LOW BIT RATES	398
11.5.1 AMI Code in the Subscriber Plant	398
11.5.2 2B1Q Code in Subscriber Plant	399
11.6 DISCUSSION AND CONCLUSIONS.....	400
11.7 REFERENCES.....	401
12.0 DATA AT PRISDN RATE.....	403
12.1 INTRODUCTION	404
12.2 TRANSMISSION CONSIDERATIONS.....	405
12.2.1 Loop Selection Guidelines	405
12.2.2 Encoding and Spectral Shaping.....	405

12.3 CODES FOR PRIMARY RATE ISDN.....	407
12.3.1 One-D Codes	407
12.3.2 Two-D Codes.....	407
12.3.3 N-D Codes	407
12.4 THE 64 POINT 2-D CAP RESULTS AT E1 RATE.....	408
12.4.1 General United States Loop Environments	408
12.4.2 Swiss Loops Performance at E1 Rate	416
12.5 DISCUSSION OF RESULTS	417
12.6 CONCLUSIONS.....	418
12.7 REFERENCES.....	418
13.0 PERFORMANCE OF TRELLIS CODING.....	421
13.1 INTRODUCTION	421
13.2 SOFTWARE ENHANCEMENTS FOR TRELLIS CODES.....	423
13.3 LOOP GAINS	423
13.3.1 16 QAM/8-PSK Results	423
13.3.2 64 QAM/32-CROSS Results.....	427
13.3.3 Loop Topology; Residual Echo and Trellis Gains	428
13.4 SYSTEM PERFORMANCE AND DESIGN CHOICE.....	429
13.4.1 Comparison of 16 QAM Trellis Coded (520 kbaud) with Uncoded 16 QAM (390 kbaud).....	429
13.4.2 Comparison Of 64 QAM Trellis Coded (310 kbaud) with Uncoded 64 QAM (260 kbaud).....	433
13.5 DISCUSSION OF RESULTS AND CONCLUSIONS.....	437
13.6 REFERENCES.....	438
14.0 DIGITAL SUBSCRIBER LINE (HDSL AND ADSL) CAPACITY.....	439
14.1 INTRODUCTION	440
14.2 THE SUBSCRIBER ENVIRONMENT FOR HDSL AND ADSL APPLICATIONS	441
14.2.1 The Physical Characteristics.....	442
14.2.2 Loss Characteristics	444
14.2.2.1 Cumulative Loss Distribution.....	444
14.2.2.2 Multiple Interferer Crosstalk.....	449
14.2.2.3 Symmetric Frequency Dependent Crosstalk Limits	451
14.2.2.4 Asymmetric (Frequency Independent) Crosstalk Limits	454
14.2.3 Spectral Limitations and Digital Capacity.....	458
14.3 EFFECTS OF IMPAIRMENTS.....	459
14.3.1 Bridged Taps	459
14.3.2 Digital Loop Carriers (DLC).....	461
14.3.3 Drop Lengths.....	461
14.3.4 Other Impairments	464

14.4 CONCLUSIONS AND DISCUSSION OF RESULTS.....	465
14.5 REFERENCES.....	466

PART V RECENT HIGH-SPEED NETWORK

ENVIRONMENTS 469

15.0 KNOWLEDGE HIGHWAYS 471

15.1 MODERN NETWORK ENVIRONMENTS	472
15.2 OPTICAL TRANSMISSION VERSUS OPTICAL NETWORK.....	473
15.3 SONET: THE SYNCHRONOUS TRANSPORT STANDARD.....	474
15.4 SONET ARCHITECTURES	479
15.5 ATM FUNDAMENTALS.....	483
15.6 OSI AND ATM.....	487
15.6.1 ATM Adaptation Layer (AAL) Functions	489
15.6.2 ATM Layer Functions	491
15.6.3 ATM Physical Layer	491
15.6.4 TCS Functions	491
15.6.5 Physical Medium Sublayer.....	491
15.6.6 ATM Header and ATM Functions	491
15.6.7 DS-1, DS-3 and ATM to SONET Signals.....	492
15.7 ATM AND ITS ROLE IN EVOLVING NETWORKS	494
15.7.1 ATM Building Blocks	495
15.7.2 ATM Switch.....	495
15.7.3 ATM Media	496
15.7.4 ATM Network Configurations.....	496
15.7.5 ATM and Existing Data Networks	497
15.7.6 ATM and ISDN	497
15.7.7 ATM and IN Networks	499
15.8 CONCLUSIONS.....	501
15.9 REFERENCES.....	501

16.0 IMPACT OF FIBER OPTIC TECHNOLOGY 503

16.1 THE ROLE OF FIBER	504
16.2 OPTICAL COMMUNICATION SYSTEMS.....	505
16.2.1 General Optical Device Concepts	506
16.2.2 Optical Fiber	508
16.2.2.1 Single Mode Fiber.....	511
16.2.2.2 Multimode Fiber	513
16.2.2.3 Optical Properties	514
16.2.2.4 Optical Properties; Delay Distortion or Dispersion.....	515
16.2.2.5 One Single Mode through the Fiber.....	518
16.2.2.6 Multiple Modes through the Fiber	519
16.2.3 Optical Devices for Emerging Networks.....	522
16.2.3.1 Optical Sources.....	522

16.2.3.2 Light Emitting Diodes.....	523
16.2.3.3 CSBH Lasers.....	524
16.2.3.4 CMBH Lasers.....	526
16.2.3.5 Photodetectors.....	529
16.2.3.6 Quantum Well Devices.....	538
16.2.3.7 Optical Amplifier and Repeaters.....	539
16.2.3.8 Integration of Optical Devices.....	540
16.2.3.9 Photonic Switches.....	541
16.3 WDM FOR ENHANCED RATES.....	544
16.4 DIRECT DETECTION AND COHERENT OPTICAL SYSTEMS.....	545
16.5 DIGITAL CAPACITY OF OPTICAL SYSTEMS.....	547
