

# WATER TREATMENT HANDBOOK

VOL 2

 **Degremont**

## VOLUME 2

CHAPTER

# 9

### PRELIMINARY TREATMENT SYSTEMS

INTRODUCTION	.....	595
1. SCREENING	.....	596
1.1. Operating conditions	.....	596
1.1.1. Hydraulic sizing – Clogging	.....	596
1.1.2. Automatic control and the protection of bar screens	.....	597
1.2. Different types of bar screens	.....	597
1.2.1. General construction principles	.....	597
1.2.2. Curved bar screen (DC type)	.....	600
1.2.3. Fine curved bar screen (GFC type)	.....	600
1.2.4. Straight bar screen (GDH type)	.....	600
1.2.5. Straight bar screen with cables (GDC type)	.....	601
1.2.6. Fine straight bar screen (GFD type)	.....	601
1.2.7. Other bar screens	.....	603
1.3. Comminution	.....	604
1.3.1. Gravity flow comminutors (raw water)	.....	604
1.3.2. Pressure comminutors (raw water and sludge)	.....	604
2. GRIT REMOVAL	.....	606
2.1. Operating conditions	.....	606
2.1.1. Grit removal in surface water	.....	606
2.1.2. Grit removal in municipal wastewater	.....	607
2.1.3. Grit removal in industrial wastewater	.....	607
2.2. Circular grit removers	.....	608
2.3. Aerated rectangular grit chambers	.....	608
2.4. "Metallurgy" grit removers	.....	609
2.5. Hydrocyclones	.....	611
3. PRESEDIMENTATION	.....	613
3.1. Field of application	.....	613
3.2. Application	.....	613
4. GREASE AND OIL REMOVAL	.....	615
4.1. Products to be separated	.....	615
4.2. Grease separators	.....	615
4.2.1. Operating conditions	.....	615
4.2.2. Circular grit/grease separator	.....	616
4.2.3. Rectangular grit/grease separator	.....	618
4.2.4. Rectangular grease separator with aerator/mixers at the head of the unit	.....	619

4.3. Oil separators .....	620
4.3.1. Operating conditions .....	620
4.3.2. Gravity preliminary oil separators .....	621
4.4. Recovery of oil and floating matter in basins or lagoons. . .	622
5. STRAINING .....	624
5.1. Straining of wastewater .....	624
5.2. Strainers for surface water .....	625
5.2.1. Macrostraining .....	625
5.2.2. Microstraining .....	625
5.3. Mechanical filtration or pressure straining .....	628
6. DISPOSAL AND TREATMENT OF BY-PRODUCTS .....	629
6.1. Screenings .....	629
6.2. Grit .....	630
6.3. Grease and scum .....	631

CHAPTER

10

---

FLOCCULATION - SETTLING - FLOTATION

---

XXXII

1. ADDITION OF REAGENTS .....	635
1.1. Impeller type flash mixers .....	635
1.2. Static mixers .....	636
1.2.1. The Radialmix .....	636
1.2.2. The MSC .....	637
1.3. Turbactor .....	638
2. FLOCCULATORS .....	639
2.1. Mechanical flocculators .....	639
2.1.1. Paddle type flocculators .....	639
2.1.2. Propeller type flocculators .....	639
2.1.3. Practical application .....	640
2.2. Static flocculators .....	641
3. SETTLING TANKS .....	642
3.1. Static settling tanks .....	642
3.1.1. Plain settling tanks .....	642
3.1.2. Sédipac units .....	650
3.1.3. Suction-type scraper settling tanks .....	652
3.2. Solids contact units .....	661
3.2.1. Sludge blanket units .....	661
3.2.2. Sludge recirculation units .....	667
3.2.3. Densadeg clarifier/thickener .....	670
3.3. Granular contact media clarifiers - The Gyrazur .....	673

3.4. Sludge draw-off devices . . . . .	676
3.4.1. Internal collection . . . . .	676
3.4.2. Recovery . . . . .	676
3.4.3. General configuration . . . . .	676
3.4.4. Sludge removal devices . . . . .	677
3.4.5. Automation . . . . .	678
3.4.6. Scum . . . . .	678
4. FLOTATION UNITS . . . . .	679
4.1. General technology . . . . .	679
4.1.1. General description of a flotation unit . . . . .	679
4.1.2. Saturation vessels . . . . .	681
4.1.3. Recovering floated sludge . . . . .	681
4.2. Circular flotation units . . . . .	681
4.2.1. Flotazur BR . . . . .	681
4.2.2. Sédiflotazur . . . . .	682
4.3. Rectangular units . . . . .	683
4.3.1. Flotazur P . . . . .	683
4.3.2. Flotazur L . . . . .	683
4.4. Flotation units for sludge thickening . . . . .	685
4.4.1. General . . . . .	685
4.4.2. FE flotation units . . . . .	686
4.4.3. FES flotation units . . . . .	686

XXXIV

CHAPTER

AEROBIC BIOLOGICAL PROCESSES

---

1. ACTIVATED SLUDGE . . . . .	689
1.1. Installation loading and operational characteristics . . . . .	689
1.2. Possible arrangements of activated sludge tanks . . . . .	691
1.2.1. Plug flow tank . . . . .	691
1.2.2. Completely mixed tank . . . . .	691
1.2.3. Closed loop basins . . . . .	692
1.2.4. Cascade tank . . . . .	692
1.2.5. Stepped feed tank . . . . .	693
1.2.6. Contact-stabilization process . . . . .	693
1.2.7. Adsorption-bioaeration process . . . . .	693
1.3. The clarifier and recycling . . . . .	694
1.4. Aeration systems . . . . .	696
1.4.1. Efficiency criteria and comparison of aeration systems . . . . .	696

1.4.2. Surface aerators .....	699
1.4.3. Aeration by compressed air .....	705
1.4.4. Mixed aeration – Separate aeration/mixing operations .....	711
1.4.5. Use of pure oxygen .....	712
1.5. Package units .....	715
1.5.1. General .....	715
1.5.2. Extended aeration units .....	715
1.5.3. The Oxyrapid R. ....	722
2. ATTACHED GROWTH .....	725
2.1. Trickling filters .....	725
2.1.1. Trickling filters with traditional fill .....	725
2.1.2. Trickling filters with plastic fill .....	725
2.2. Fixed granular beds .....	731
2.2.1. Filtration media: Biolite .....	732
2.2.2. Biofor (Biological Filtration Oxygenated Reactor) ..	733
2.2.3. Biodrof (Biological Dry Oxygenated Filter) .....	737
2.2.4. Filtration with predissolution of air or oxygen (Ox-yazur) .....	740
2.2.5. Nitrazur .....	740
2.2.6. Choice of treatment technique with fixed granular beds .....	742

**CHAPTER**  
**12**

---

**METHANE FERMENTATION**

---

1. GENERAL DESIGN .....	746
1.1. Acidification .....	746
1.2. Heating .....	746
1.3. pH .....	746
1.4. Safety systems .....	747
1.5. Gas storage .....	747
2. SUSPENDED GROWTH .....	748
2.1. Analift .....	748
2.1.1. Design .....	748
2.1.2. Applications and performance .....	749
2.2. Anapulse .....	750
2.2.1. Design .....	750
2.2.2. Applications and performance .....	752
3. ATTACHED GROWTH .....	753
3.1. Anafiz .....	753
3.1.1. Design .....	753

3.1.2. Applications and performance .....	754
3.2. Anaflox .....	755
3.2.1. Design .....	755
3.2.2. Applications and performance .....	756
4. SYSTEM START-UP AND CONTROL PROCEDURES.....	757
4.1. Start-up and seeding .....	757
4.2. Operating parameters .....	758

CHAPTER

13

---

FILTERS

---

1. FILTERS USING GRANULAR MEDIA .....	762
1.1. Operating conditions .....	762
1.2. Supports for the media .....	762
1.3. Backwashing dense media filters .....	763
1.3.1. Distributing the washing fluids .....	763
1.3.2. Wash water consumption versus filtered volume ...	765
1.4. Degrémont filter types .....	765
2. PRESSURE FILTERS .....	766
2.1. Filters washed with water alone .....	766
2.2. Air and water backwashed filters .....	768
2.3. Filters featuring successive air scour and water washing ...	770
3. GRAVITY FILTERS .....	772
3.1. Filters backwashed by air and water .....	772
3.1.1. Aquazur T filters .....	772
3.1.2. Aquazur V filters .....	776
3.1.3. FV 1 filters .....	778
3.1.4. Greenleaf filters .....	778
3.2. Filters backwashed successively by air and water .....	780
3.2.1. Médiatur T and G filters .....	780
3.2.2. Médiatur V, BV, B and GH filters .....	781
4. SPECIAL FILTERS .....	784
4.1. Self-washing valveless filters .....	784
4.2. The Médiatur biflow filter .....	785
4.2.1. Operating principle .....	785
4.2.2. Washing .....	785
4.2.3. Operation .....	786
4.2.4. Advantages .....	786
4.3. Colexer upflow oil separation filters .....	786
4.4. Precoat filters - Cannon filters .....	788

4.4.1. Washing.....	788
4.4.2. Filter design .....	788
5. CONTROL AND REGULATION OF FILTERS .....	791
5.1. Constant rate, variable head filters .....	791
5.2. Constant rate, compensated clogging filters.....	792
5.2.1. Control of a battery of filters .....	792
5.2.2. Filter controllers .....	794
5.3. Declining rate filters .....	799
5.4. Comparison of the various control modes.....	802
5.5. Monitoring equipment .....	802

CHAPTER

# 14

---

## MODERN ION EXCHANGE METHODS

---

1. COUNTERCURRENT REGENERATION.....	805
1.1. Water blocking .....	806
1.2. Air blocking .....	806
1.3. Mechanical blocking .....	808
1.3.1. Floating beds .....	808
1.3.2. Variations of floating beds .....	809
1.3.3. UFD (Up Flow Degrémont) .....	809
1.3.4. Use of superimposed beds .....	810
1.3.5. Performance of exchangers regenerated by counter-current methods .....	811
2. MOVING BEDS .....	813
2.1. CIE (Continuous Ion Exchanger) .....	813
2.1.1. CIE using a single exchanger .....	813
2.1.2. CIE using a mixed bed .....	814
2.1.3. Application of the CIE process to the chemical industry.....	816
2.1.4. Special advantages of the CIE-Degrémont process..	817
2.2. Fluidized beds .....	817
2.3. Turbulent beds .....	818
3. OTHER TREATMENTS .....	819
3.1. Removal of organic matter .....	819
3.2. Special applications .....	819
3.2.1. Treatment of juices and sweet liquids .....	820
3.2.2. Dairy applications.....	820
3.2.3. Treatment of industrial effluents .....	821

CHAPTER

15

SEPARATION BY MEMBRANES

1. REVERSE OSMOSIS (RO) MODULES, ULTRAFILTRATION (UF) MODULES AND MICROFILTRATION (MF) MODULES .....	823
1.1. Plate type modules .....	823
1.2. Spiral wound modules .....	824
1.3. Tubular modules .....	825
1.4. Hollow fibre modules .....	826
2. THE DIFFERENT TYPES OF ARRANGEMENT .....	830
2.1. Principle .....	830
2.2. Full-scale applications .....	831
2.2.1. Intermittent flow in open loop .....	831
2.2.2. Intermittent flow in closed loop .....	832
2.2.3. Semi-continuous flow in closed loop .....	832
2.2.4. Single-stage continuous flow .....	832
2.2.5. Multi-stage continuous flow .....	833
3. DESALINATION .....	835
3.1. Objective .....	835
3.2. Choice of membrane .....	835
3.3. Use of reverse osmosis .....	836
3.4. Applications .....	837
4. CLARIFICATION AND DISINFECTION OF WATER .....	841
5. ULTRAPURE WATER .....	845
5.1. The electronics industry .....	845
5.1.1. The various techniques used .....	845
5.1.2. Measuring methods .....	847
5.1.3. Comments on the design and completion of installations .....	848
5.2. Pharmaceutical industries .....	848
6. OTHER APPLICATIONS OF MEMBRANES IN THE TREATMENT OF WATER .....	849
6.1. MWW recycling treatment .....	849
6.2. Treatment of industrial effluents .....	849
6.3. Membrane bioreactors .....	851

XVIII

CHAPTER

16

DEAERATION, STRIPPING, EVAPORATION

1. DECARBONATORS AND AIR OR GAS STRIPPERS .....	853
1.1. Decarbonators .....	854
1.2. Air strippers .....	856
1.3. Gas strippers .....	856

2. STEAM STRIPPERS AND DISTILLATION COLUMNS . . . .	857
3. DEAERATING HEATERS . . . . .	858
3.1. Vertical deaerating heater . . . . .	859
3.2. Horizontal deaerating heater . . . . .	859
3.3. Deaerating heater with horizontal storage tank . . . . .	861
3.4. Packed column deaerator . . . . .	862
4. VACUUM DEAERATORS . . . . .	864
5. COMBINED DEAERATORS . . . . .	866
6. AIR SCRUBBERS – AIR DEODORIZING DEVICES . . . . .	866
6.1. Venturi scrubbers . . . . .	866
6.2. Packed bed scrubbers . . . . .	867
7. SEA WATER EVAPORATORS . . . . .	869
7.1. Marine single-effect evaporation . . . . .	869
7.2. Multiple-effect distillation . . . . .	869
7.3. Multi-stage flash distillation . . . . .	870
7.4. Steam compression distillation . . . . .	871

CHAPTER

17

---

OXIDATION – DISINFECTION

---

1. OXIDATION USING AIR . . . . .	873
1.1. Aeration by water trickling . . . . .	874
1.1.1. Cascade . . . . .	874
1.1.2. Trickling over trays . . . . .	874
1.1.3. Trickling over contact media . . . . .	874
1.2. Aeration by water spray . . . . .	874
1.3. Diffused aeration . . . . .	875
1.3.1. Gas diffusion . . . . .	875
1.3.2. Contact media aerators . . . . .	876
1.3.3. Mechanical aerators and mixers . . . . .	877
2. OXIDATION AND DISINFECTION USING CHLORINE . . . . .	878
2.1. Sources of chlorine . . . . .	878
2.2. Field of application . . . . .	878
2.3. Treatment . . . . .	878
3. OXIDATION AND DISINFECTION USING CHLORINE DIOXIDE . . . . .	879
3.1. Preparation . . . . .	879
3.2. Field of application . . . . .	880
3.3. Treatment . . . . .	880

4. OXIDATION AND DISINFECTION USING OZONE . . . . .	880
4.1. Physical and thermodynamic properties . . . . .	880
4.2. Ozone and plasmas . . . . .	880
4.3. Basic principles of ozone production . . . . .	882
4.4. Fields of application . . . . .	884
4.5. Dissolution of ozone . . . . .	885
4.5.1. General data on ozone transfer . . . . .	885
4.5.2. Theoretical considerations on ozone transfer . . . . .	886
4.5.3. Absorption with chemical reactions . . . . .	887
4.5.4. Choosing the contact reactors . . . . .	887
4.5.5. Reactors . . . . .	888
5. OZONE GENERATORS . . . . .	892
5.1. Different types of ozone generators . . . . .	892
5.2. Closed-tube ozone generators . . . . .	892
5.3. Electrical power supply for ozone generators . . . . .	896
5.3.1. Mains frequency supply . . . . .	896
5.3.2. Medium frequency (MF) supply . . . . .	897
5.4. The Degrémont range of ozone generators . . . . .	899
5.5. Feed gas supply . . . . .	901
5.5.1. Air fed generators . . . . .	901
5.5.2. Oxygen fed generators . . . . .	905
5.6. Off-gas ozone destruction . . . . .	907
6. OTHER OXIDATION PROCESSES . . . . .	910
6.1. Potassium permanganate . . . . .	910
6.2. Bromine . . . . .	910
6.3. Hydrogen peroxide . . . . .	910
6.4. Permonosulphuric acid (Caro's acid) . . . . .	910
6.5. Chloramines . . . . .	911
6.6. Ultraviolet radiation . . . . .	911
6.7. Ionizing radiation . . . . .	912
7. REMOVAL OF RESIDUAL OXIDIZING AGENTS . . . . .	913
7.1. Removal by chemical means . . . . .	913
7.2. Removal by physical means (dechlorinating activated carbon) . . . . .	914

XL

CHAPTER

18

---

THICKENING AND STABILIZATION OF SLUDGE

---

1. SLUDGE THICKENING . . . . .	919
1.1. Thickening by settling . . . . .	920
1.1.1. Design laws . . . . .	920
1.1.2. Mechanized thickeners . . . . .	923
1.1.3. Operation of thickeners . . . . .	924

1.2. Thickening by flotation .....	925
1.2.1. Excess activated sludge .....	925
1.2.2. Drinking water sludge .....	928
1.2.3. Operation of flotation-thickening units .....	928
1.3. Thickening by centrifugation .....	929
1.4. Thickening by drainage .....	929
<b>2. SLUDGE STABILIZATION .....</b>	<b>932</b>
2.1. Anaerobic digestion .....	932
2.1.1. Gas production .....	932
2.1.2. Parameters affecting the performance of anaerobic digestion .....	933
2.1.3. Results and advantages of digestion .....	934
2.1.4. Types and design of sludge digesters .....	935
2.1.5. Design of sludge digesters .....	936
2.2. Aerobic stabilization .....	940
2.2.1. Process and system design .....	940
2.2.2. Operations .....	942
2.2.3. Thermophilic aerobic stabilization .....	942
2.3. Chemical stabilization .....	944
2.4. Pasteurization .....	945

CHAPTER

19

---

**SLUDGE TREATMENT**

---

<b>1. SLUDGE CONDITIONING .....</b>	<b>950</b>
1.1. Chemical conditioning .....	950
1.1.1. Inorganic reagents .....	950
1.1.2. Polyelectrolytes .....	955
1.2. Thermal conditioning .....	959
1.2.1. Advantages of thermal conditioning .....	960
1.2.2. Constraints of use .....	960
1.2.3. The sludge heating procedure .....	961
1.2.4. Wet oxidation of sludge .....	963
1.3. Other conditioning methods .....	964
1.3.1. Freezing .....	964
1.3.2. Conditioning using additives .....	964
1.3.3. Electro-acoustic conditioning .....	965
1.3.4. Conditioning by solvents or oils .....	965
1.3.5. Solidification agents .....	965
<b>2. DEWATERING OF SLUDGE BY FILTRATION .....</b>	<b>966</b>
2.1. Mathematical representation of filterability .....	966
2.1.1. Specific resistance to filtration $r$ .....	966

2.1.2. Sludge compressibility coefficient . . . . .	966
2.1.3. Dryness limit . . . . .	967
2.2. Drying beds . . . . .	969
2.2.1. Sand beds . . . . .	969
2.2.2. Dehydro drying beds . . . . .	972
2.3. Vacuum filtration . . . . .	972
2.3.1. Description and operation . . . . .	972
2.3.2. Production capacity . . . . .	974
2.3.3. Calculating the rate of chemical conditioning . . . . .	974
2.4. Pressure filtration in watertight chambers . . . . .	977
2.4.1. Conventional recessed plate filter presses . . . . .	977
2.4.2. Conventional plate-diaphragm filter presses . . . . .	987
2.4.3. Automatic filter presses . . . . .	988
2.4.4. Other presses: screw presses . . . . .	993
2.5. Belt filters . . . . .	994
2.5.1. Filtration principle . . . . .	994
2.5.2. Superpressdeg filters . . . . .	995
2.5.3. Belt filters for small purification facilities . . . . .	1007
2.5.4. Mobile dewatering units . . . . .	1010
3. CENTRIFUGAL SEPARATION . . . . .	1011
3.1. Operating parameters . . . . .	1011
3.1.1. Absolute velocity of the bowl, $V_A$ . . . . .	1011
3.1.2. Relative velocity, $V_R$ . . . . .	1011
3.1.3. Liquid ring depth . . . . .	1012
3.2. Performance . . . . .	1013
3.3. Thickening of excess sludge by centrifuging . . . . .	1015
3.4. Operation . . . . .	1016
4. DRYING - INCINERATION . . . . .	1017
4.1. Heat balance . . . . .	1017
4.1.1. General formulation . . . . .	1018
4.1.2. Example of a simplified calculation . . . . .	1019
4.2. Main components of a drying or incineration plant . . . . .	1020
4.3. Drying . . . . .	1021
4.3.1. Indirect drying . . . . .	1022
4.3.2. Direct drying . . . . .	1025
4.4. Incineration . . . . .	1028
4.4.1. Rotary furnace . . . . .	1028
4.4.2. Multiple-hearth furnace . . . . .	1028
4.4.3. Fluidized bed incinerators . . . . .	1034
4.4.4. Spray furnace . . . . .	1039
4.4.5. Sludge and household refuse . . . . .	1039
5. OTHER TREATMENT FOR DEWATERED SLUDGE . . . . .	1041
5.1. Compost preparation . . . . .	1041
5.1.1. Principles and conditions of use . . . . .	1041

5.1.2. Choice of the carbonaceous support .....	1043
5.1.3. Ripening .....	1043
5.1.4. Main sludge compost procedures .....	1043
5.1.5. Thermoposting .....	1045
5.1.6. The Triga reactor .....	1045
5.2. Miscellaneous treatment processes .....	1046
5.2.1. Sludge recycling by worm culture .....	1046
5.2.2. Production of combustible oils from sludge .....	1048
5.2.3. Formation of lightweight aggregates .....	1049

CHAPTER

20

---

**STORAGE AND FEEDING OF REAGENTS**

---

1. GENERAL CONDITIONS .....	1051
1.1. Packaging - Conditioning .....	1051
1.2. Location .....	1053
1.3. Storage unit design .....	1054
1.4. Transportation - Unloading - Transferring .....	1054
1.5. Access .....	1055
1.6. Materials .....	1055
1.7. Safety .....	1056
2. FEEDING LIQUID REAGENTS .....	1058
2.1. Feeding by metering pump .....	1058
2.1.1. Plunger metering pump .....	1058
2.1.2. Metering pump with hydraulically-operated dia- phragm .....	1059
2.1.3. Metering pump with mechanically-actuated dia- phragm .....	1059
2.1.4. Electromagnetic metering pump .....	1059
2.1.5. Metering pump with eccentric screw .....	1060
2.1.6. Water driven metering pump .....	1060
2.2. Gravity metering .....	1060
2.2.1. DRC reagent feeders .....	1060
2.2.2. Orifice type feeders .....	1061
3. STORAGE AND FEEDING OF POWDERED PRODUCTS .....	1063
3.1. Storage .....	1063
3.1.1. Installation .....	1063
3.1.2. Filling the silo .....	1063
3.1.3. Devices used to enhance product flow .....	1064
3.2. Feeding .....	1064
3.2.1. Volumetric feeders .....	1064
3.2.2. Gravimetric feeders .....	1065

4.	PREPARATION OF SUSPENSIONS AND SOLUTIONS OF POWDERED OR GRANULAR REAGENTS	1067
4.1.	General	1067
4.2.	Preparing solutions	1068
4.2.1.	Sodium chloride	1069
4.2.2.	Aluminium sulphate	1069
4.2.3.	Ferric chloride	1069
4.3.	Lime	1071
4.3.1.	Milk of lime	1072
4.3.2.	Lime water	1074
4.4.	Other products	1077
4.4.1.	Potassium permanganate	1077
4.4.2.	Calcium carbonate	1077
4.4.3.	Bentonite (clay)	1077
4.4.4.	Ferrous sulphate	1077
5.	STORING, FEEDING, AND DISSOLVING GASEOUS RE-AGENTS	1078
5.1.	Chlorine	1078
5.1.1.	Feeding and metering	1078
5.1.2.	Chlorinators operating under a vacuum	1079
5.1.3.	Detection and neutralization of chlorine leaks	1080
5.1.4.	Complete installation	1082
5.2.	Carbon dioxide	1083
5.2.1.	CO <sub>2</sub> injection unit	1084
5.2.2.	Example	1084
5.3.	Ammonia NH <sub>3</sub>	1085
6.	OTHER PREPARATIONS	1086
6.1.	Using polymers	1086
6.1.1.	Preparation of polyamines	1086
6.1.2.	Preparation of polyacrylamides	1086
6.1.3.	On-line dilution	1088
6.2.	Slaking quick lime (CaO)	1089
6.2.1.	Powdered quick lime	1089
6.2.2.	Granular quick lime	1090
6.2.3.	Crystal lime	1091
6.3.	Chlorine dioxide	1091
6.3.1.	Oxidation of sodium chlorite by chlorine	1091
6.3.2.	Action of hydrochloric acid on sodium chlorite	1092
6.3.3.	Feeding chlorine dioxide solutions	1093
6.3.4.	Precautions	1093
6.4.	Powdered activated carbon (PAC)	1094

**MEASUREMENT, CONTROL, AUTOMATION AND SUPERVISION**

---

1. MEASUREMENT .....	1097
1.1. General .....	1097
1.2. Measurement of general parameters – Principles .....	1099
1.2.1. Flow measurements .....	1099
1.2.2. Level measurements in liquids .....	1100
1.2.3. Measuring loss of head .....	1101
1.2.4. Temperature .....	1102
1.3. Measurement of specific parameters – Principles .....	1102
1.3.1. Physical sensors .....	1102
1.3.2. Specific analyzers .....	1105
1.4. On-off sensors .....	1105
1.5. Warning stations .....	1106
1.6. Instrumentation .....	1110
1.6.1. Definitions .....	1110
1.6.2. Conversion law .....	1110
1.6.3. Quality factors .....	1111
1.7. Technological developments .....	1112
1.7.1. Intelligent sensors .....	1112
1.7.2. Microsensors .....	1112
1.7.3. Modelling .....	1112
2. AUTOMATION .....	1113
2.1. General .....	1113
2.1.1. Purpose .....	1113
2.1.2. Structuring an automated system .....	1114
2.2. Control .....	1115
2.2.1. General principles .....	1115
2.2.2. Traditional modes of control .....	1115
2.2.3. Choice of control mode .....	1118
2.2.4. Programmable technology and modelling .....	1120
2.3. Automatic control systems .....	1122
2.3.1. Combinational controllers .....	1122
2.3.2. Sequential controllers .....	1122
2.3.3. Technology for control part .....	1126
2.4. Programmable logic controllers for industrial applications .....	1127
2.4.1. Definition .....	1127
2.4.2. PLC operating principles .....	1127
2.4.3. Programming .....	1128
2.4.4. Choice of PLC .....	1128
2.4.5. Precautions for use .....	1129

3.	AUTOMATIC CONTROL SYSTEMS AND WATER TREATMENT.....	1130
3.1.	Main functions of automatic control.....	1130
3.2.	Main automatic control functions in a clarification and filtration plant.....	1131
3.3.	Main automatic control functions in wastewater treatment plant.....	1132
3.4.	Main automatic control functions in an ion exchange facility.....	1135
3.5.	Main automatic control functions in sludge treatment.....	1136
3.6.	Examples of installations.....	1138
3.6.1.	Pumping and water distribution.....	1138
3.6.2.	Filtration of drinking water supplies.....	1140
3.6.3.	Air delivery to activated sludge tanks.....	1142
3.6.4.	Turbine aeration.....	1142
3.6.5.	Sludge dewatering by belt filter.....	1144
4.	SUPERVISION.....	1146
4.1.	Operator interfaces.....	1146
4.2.	Data acquisition.....	1148
4.3.	Remote monitoring and personnel callout.....	1150
4.4.	Computerized supervision or centralized technical management (CTM) systems.....	1151
4.5.	Decision-support systems.....	1153
4.5.1.	Maintenance aid.....	1153
4.5.2.	Operating aids.....	1154
4.5.3.	Expert systems.....	1154
4.6.	Total system architecture.....	1156
4.6.1.	Security of operation.....	1156
4.6.2.	Crippled mode operation.....	1156
4.6.3.	Equipment hierarchy.....	1157
4.7.	Communications networks.....	1161
4.8.	Recommendations for use.....	1164
4.8.1.	Installation and maintenance conditions.....	1164
4.8.2.	The state of the art.....	1165
4.8.3.	Performance limits.....	1165

XLVI

CHAPTER  
**22**

TREATMENT OF DRINKING WATER

INTRODUCTION.....	1167
1. GENERAL PROCESSES.....	1169
1.1. Raw water storage.....	1169
1.2. Water intakes - General.....	1169
1.2.1. Design of water intake.....	1170

1.2.2. Roughing treatment .....	1170
1.2.3. Pretreatment with chlorine .....	1171
1.3. Preoxidation .....	1171
1.3.1. Physical treatment: aeration .....	1171
1.3.2. Chemical treatment .....	1172
1.4. Clarification .....	1175
1.4.1. Clarification by coagulation, flocculation, settling and filtration .....	1176
1.4.2. Clarification by partial coagulation, flocculation and filtration .....	1179
1.4.3. Advantages of flotation .....	1181
1.5. Removal of organic matter .....	1182
1.5.1. Aeration - Air stripping .....	1182
1.5.2. Coagulation - Flocculation - Settling (or Flotation) .....	1183
1.5.3. Filtration .....	1183
1.5.4. Additional treatments .....	1184
1.6. Removing foul tastes .....	1188
1.6.1. Taste due to mineralization .....	1188
1.6.2. Characterizing other tastes .....	1188
1.6.3. Treatments .....	1189
1.7. Artificial recharge of aquifer .....	1191
1.8. Disinfection .....	1193
1.8.1. Definition .....	1193
1.8.2. Bactericidal effect and remanent effect .....	1193
1.8.3. General conditions for good disinfection .....	1194
1.8.4. Conditions of use .....	1194
1.8.5. UV radiation .....	1196
1.9. Sludge treatment .....	1197
1.9.1. Types of sludge .....	1197
1.9.2. In-line coagulation .....	1197
1.9.3. Complete treatment .....	1197
2. SPECIAL TREATMENT PROCESSES .....	1201
2.1. Removal of iron .....	1201
2.1.1. Iron and its natural states .....	1201
2.1.2. Iron removal by physical-chemical means .....	1202
2.1.3. Biological iron removal - The Ferazur process .....	1206
2.2. Removal of manganese .....	1210
2.2.1. Natural state of manganese .....	1210
2.2.2. Physical-chemical removal of manganese .....	1211
2.2.3. Biological removal of manganese. The Mangazur process .....	1214
2.3. Removal of ammonium .....	1217
2.3.1. Physical-chemical processes .....	1217
2.3.2. Biological removal of ammonium .....	1217

2.3.3. Biological treatment of water containing ammonium and iron or manganese . . . . .	1220
2.4. Removal of nitrates . . . . .	1220
2.4.1. Physical-chemical means. The Azurion process. . . . .	1220
2.4.2. Biological processes . . . . .	1221
2.4.3. Advantages of different nitrate removal techniques . . . . .	1224
2.5. Modifying the carbonate balance . . . . .	1225
2.5.1. Neutralization . . . . .	1225
2.5.2. Remineralization . . . . .	1226
2.5.3. Softening - Lime softening . . . . .	1228
2.6. Fluoridation and fluoride removal . . . . .	1229
2.6.1. Fluoridation . . . . .	1229
2.6.2. Removal of fluorine . . . . .	1230
2.7. Other parameters . . . . .	1231
2.7.1. Removal of sulphates and chlorides . . . . .	1231
2.7.2. Arsenic . . . . .	1231
2.7.3. Heavy metals . . . . .	1231
2.7.4. Radioactivity . . . . .	1232
2.8. Destruction of algae and plankton . . . . .	1232
3. STANDARDIZED SMALL PLANTS . . . . .	1234
3.1. Semi-portable GSF plants . . . . .	1234
3.2. Bidondo units . . . . .	1234
3.3. Cristal "M" . . . . .	1235

TREATMENT OF SWIMMING POOL WATER

---

1. PRINCIPLE . . . . .	1241
2. FRENCH LEGISLATION . . . . .	1242
2.1. General . . . . .	1242
2.2. Flow rate, recycling and renewal of water . . . . .	1242
2.2.1. The recycling and treatment installation . . . . .	1242
2.2.2. Fresh water supplies . . . . .	1243
2.3. Water circulation . . . . .	1243
2.4. Quality of swimming pool water . . . . .	1244
3. CLOSED-LOOP TREATMENT OF SWIMMING POOL WATER . . . . .	1245
3.1. Preliminary filtration and pumping . . . . .	1245
3.2. Filtration . . . . .	1247
3.3. Disinfection . . . . .	1248
3.3.1. Chlorine and derivatives . . . . .	1248

3.3.2. Bromine . . . . .	1249
3.3.3. Ozone . . . . .	1249
3.3.4. Other disinfectants . . . . .	1250
3.3.5. Destruction of algae . . . . .	1250
3.4. Cleaning swimming pools . . . . .	1250
3.5. Special cases. . . . .	1251
3.5.1. Correcting the pH . . . . .	1251
3.5.2. Removing iron and manganese . . . . .	1251
3.5.3. Sea water pools. . . . .	1251
3.6. Monitoring and control . . . . .	1252
3.7. Leisure pools . . . . .	1253

MUNICIPAL WASTEWATER TREATMENT

---

1. BIOLOGICAL TREATMENT . . . . .	1255
1.1. Low-rate activated sludge treatment plants . . . . .	1255
1.2. Activated sludge plants with aerobic stabilization . . . . .	1256
1.3. Plants with primary settling . . . . .	1258
1.3.1. Advantages of primary settling. . . . .	1258
1.3.2. With activated sludge . . . . .	1259
1.3.3. With the attached growth process . . . . .	1262
1.4. Combined plants: tricking filters + activated sludge . . . . .	1264
1.5. Biological nitrification and denitrification . . . . .	1264
1.5.1. Nitrification . . . . .	1264
1.5.2. Denitrification . . . . .	1265
1.5.3. Project examples . . . . .	1266
1.5.4. Attached growth process. . . . .	1270
1.6. Biological phosphate removal . . . . .	1271
1.6.1. Two-stage process. . . . .	1272
1.6.2. Four- or five-stage processes. . . . .	1272
1.6.3. Three-stage processes . . . . .	1273
1.6.4. Selecting the best process . . . . .	1274
1.6.5. Process limitations . . . . .	1274
1.6.6. Project example . . . . .	1275
1.6.7. Precautionary measures during sludge treatment . . . . .	1275
1.7. Night soil . . . . .	1276
1.7.1. Treatment. . . . .	1276
1.7.2. Project examples. . . . .	1277
1.8. Treatment quality . . . . .	1281
1.8.1. Settling test . . . . .	1281
1.8.2. Checking dissolved oxygen . . . . .	1282
1.8.3. Bulking and foaming of activated sludge. . . . .	1283

1.8.4. Doping of the treatment system.....	1284
1.8.5. Control of biological treatment.....	1285
2. PHYSICAL-CHEMICAL TREATMENT .....	1286
2.1. General .....	1286
2.2. Flocculation and physical separation .....	1288
2.3. Physical-chemical treatment + attached growth .....	1288
3. TERTIARY TREATMENT PROCESSES .....	1293
3.1. Polishing techniques .....	1293
3.1.1. Polishing lagoons .....	1293
3.1.2. Filtration .....	1294
3.1.3. Biological filtration.....	1294
3.1.4. Flocculation-clarification .....	1295
3.2. Phosphate removal .....	1296
3.3. Nitrogen removal in tertiary treatment.....	1297
3.4. Removal of non-biodegradable pollution.....	1297
3.5. Disinfection (partial) .....	1297
4. EFFICIENCY OF EFFLUENT TREATMENT PROCESSES ..	1300
4.1. Overview of treatment processes .....	1300
4.2. Examples of complete treatment lines.....	1303
4.2.1. Bex township, Switzerland .....	1303
4.2.2. Township of Seignosse-le-Penon, France.....	1304
4.2.3. Maraven treatment plant, Venezuela .....	1306
4.2.4. Municipal treatment plant in Taif, Saudi Arabia...	1307
5. SLUDGE TREATMENT .....	1309
5.1. Main sludge treatment processes .....	1309
5.2. Process design considerations .....	1309
6. TREATMENT PLANT ENGINEERING .....	1315
6.1. Overall design .....	1315
6.1.1. Factors in treatment selection.....	1315
6.1.2. Location and layout of units .....	1315
6.1.3. Control - Regulation - Management.....	1317
6.1.4. Operating costs.....	1319
6.2. Hydraulic design and pneumatic flow control.....	1319
6.3. Aeration and air production .....	1321
6.3.1. Air production plant.....	1322
6.3.2. Air supply system.....	1322
6.4. Biogas recovery and reuse .....	1324
6.4.1. Direct heat production .....	1324
6.4.2. Mechanical energy production using heat engines ..	1325
6.4.3. Electric power generation .....	1325
6.4.4. Energy self-sufficiency and economical operation ...	1326

6.5. Environmental protection .....	1327
6.5.1. Odour .....	1327
6.5.2. Noise .....	1331
6.5.3. Aerosols .....	1337
6.6. Plants serving variable populations .....	1337
6.6.1. Activated sludge plants .....	1338
6.6.2. Physical-chemical treatment with biological filtration .....	1339
6.6.3. Combined plant .....	1339
6.7. Upgrading existing plants .....	1341
6.7.1. Modernization .....	1341
6.7.2. Performance improvement .....	1341
6.7.3. Defining sludge treatment in light of actual disposal options .....	1342

**TREATMENT AND CONDITIONING OF INDUSTRIAL WATER**

---

1. BOILER WATER .....	1345
1.1. Treatment of make-up water .....	1345
1.1.1. Carbonate removal and softening facilities .....	1345
1.1.2. Total demineralization systems .....	1345
1.1.3. Deaeration facilities .....	1349
1.2. Conditioning boiler water .....	1351
2. CONDENSATES .....	1353
2.1. HP condensates .....	1353
2.1.1. Treatment .....	1353
2.1.2. Conditioning .....	1357
2.2. LP condensates .....	1358
2.2.1. Conditioning .....	1358
2.2.2. Treatment .....	1359
3. WATER USED IN MANUFACTURING PROCESSES .....	1361
3.1. Paper mills .....	1361
3.2. Breweries and factories manufacturing carbonated beverages .....	1361
3.3. Textile and dyeing facilities .....	1363
3.4. Ultrapure water .....	1363
4. PRODUCTION OF INJECTION WATER FOR OIL RECOVERY .....	1364
5. PURIFICATION OF BRINE .....	1366
5.1. Production of purified salt by recrystallization of unrefined rock salt .....	1366
5.2. Make-up to electrolytic sodium carbonate and chlorine production systems .....	1366

5.3. Continuous purification of brine in electrolytic machining . . . . .	1366
6. COOLING WATER . . . . .	1368
6.1. Protection against fouling and biological growth . . . . .	1368
6.1.1. Treatment of make-up water . . . . .	1368
6.1.2. Treatment of the system . . . . .	1369
6.2. Protection against scale deposits and corrosion . . . . .	1371
6.2.1. The "natural balance" process . . . . .	1371
6.2.2. Processes with scale inhibitors . . . . .	1372
6.2.3. Processes with corrosion inhibitors . . . . .	1373
6.2.4. Discharges . . . . .	1374
6.3. Choice of processes: how to design a cooling system . . . . .	1374
6.3.1. Basic data . . . . .	1375
6.3.2. Operating reports . . . . .	1375
6.4. Saving water . . . . .	1375
6.4.1. Re-using industrial or domestic wastewater . . . . .	1375
6.4.2. Sidestream purification . . . . .	1375
6.5. Special cases: once-through systems . . . . .	1377
6.6. Special cases: closed systems . . . . .	1377
6.7. System preparation . . . . .	1377
6.8. Tests . . . . .	1378
6.9. Cooling systems using sea water . . . . .	1378
6.9.1. Once-through systems . . . . .	1378
6.9.2. Open recirculating systems . . . . .	1379

## INDUSTRIAL PROCESSES AND THE TREATMENT OF WASTEWATER

---

1. DESCRIPTION OF TREATMENT TECHNIQUES . . . . .	1381
1.1. Organization of sewers and systems . . . . .	1381
1.2. Separate treatment of effluents . . . . .	1382
1.3. Preliminary treatment . . . . .	1382
1.4. Physical-chemical treatment . . . . .	1382
1.5. Biological treatment . . . . .	1383
1.6. Tertiary treatment . . . . .	1383
1.7. Special aspects of sludge treatment . . . . .	1385
1.8. Odours . . . . .	1385
2. THE AGRIFOOD INDUSTRIES . . . . .	1386
2.1. Piggeries and other stock raising effluents . . . . .	1386
2.1.1. Mid-size stock raising . . . . .	1386
2.1.2. Large scale stock raising or centralized units for the treatment of liquid manure . . . . .	1386

2.2. Slaughterhouses, meat packing and associated industries . .	1387
2.2.1. Preliminary treatment . . . . .	1387
2.2.2. Physical-chemical treatment . . . . .	1387
2.2.3. Biological treatment . . . . .	1388
2.2.4. Manufacturing of gelatins and animal glue . . . . .	1388
2.3. The dairy industry. . . . .	1389
2.3.1. Treatment linked to manufacturing processes . . . . .	1389
2.3.2. General effluents . . . . .	1390
2.4. Fruit and vegetable canning . . . . .	1392
2.5. Breweries . . . . .	1395
2.5.1. Specific treatments or treatments associated with manufacturing . . . . .	1395
2.5.2. General effluents . . . . .	1395
2.6. Potato and starch industries . . . . .	1398
2.6.1. General aspects. . . . .	1398
2.6.2. Treatment of process water . . . . .	1398
2.7. Cane and beet sugar mills. . . . .	1399
2.7.1. Cane sugar mills. . . . .	1399
2.7.2. Beet sugar mills . . . . .	1399
2.8. Distilleries . . . . .	1401
2.9. Edible oil mills and soap factories. . . . .	1402
2.9.1. Oil extraction . . . . .	1402
2.9.2. Oil refining. . . . .	1402
2.10. Tanneries and leather industries . . . . .	1404
2.10.1. Preliminary treatment . . . . .	1404
2.10.2. General treatment . . . . .	1405
3. PAPER INDUSTRIES . . . . .	1406
3.1. Paper pulp factories. . . . .	1406
3.2. Paper and cardboard manufacturing. . . . .	1407
3.2.1. Short circuit internal treatment . . . . .	1408
3.2.2. Long circuit final treatment . . . . .	1408
4. THE PETROLEUM INDUSTRY . . . . .	1412
4.1. Production . . . . .	1412
4.2. Transport and ballast water. . . . .	1412
4.3. Refining. . . . .	1413
4.4. Spent caustic soda . . . . .	1416
5. COAL INDUSTRIES AND THERMAL POWER STATIONS . . . . .	1418
5.1. Coal washing plant . . . . .	1418
5.2. Gasification . . . . .	1418
5.3. Thermal power stations. . . . .	1419
5.3.1. Oily water from fuelled power stations . . . . .	1419
5.3.2. Effluents from flue gas desulphurisation . . . . .	1419

3.3.3. Cleaning effluents from air heaters and boiler tube bundles . . . . .	1420
3.3.4. Effluents from ash transportation . . . . .	1420
5.4. Household refuse incineration plant . . . . .	1422
6. SYNTHETIC CHEMISTRY AND THE PHARMACEUTICAL INDUSTRY . . . . .	1423
6.1. Special precautions . . . . .	1423
6.1.1. Neutralisation and buffer tanks . . . . .	1423
6.1.2. Biological purification - Odours . . . . .	1423
6.1.3. Clarification . . . . .	1424
6.1.4. Residual COD . . . . .	1424
6.1.5. Protection against corrosion . . . . .	1424
6.2. Examples of installations . . . . .	1424
6.2.1. The Société Chimique Roche . . . . .	1424
6.2.2. The Rexim Company . . . . .	1425
6.2.3. The Shell Chimie Company . . . . .	1425
7. THE TEXTILE INDUSTRY . . . . .	1429
7.1. Preliminary treatment . . . . .	1429
7.2. Treatment . . . . .	1430
7.2.1. Physical-chemical treatment . . . . .	1430
7.2.2. Biological treatment . . . . .	1430
7.2.3. Tertiary treatment . . . . .	1430
8. THE IRON AND STEEL INDUSTRY . . . . .	1432
8.1. Open recirculating systems . . . . .	1432
8.1.1. Coke plants . . . . .	1432
8.1.2. Blast furnace gas scrubbing . . . . .	1432
8.1.3. Scrubbing of oxygen converter gas . . . . .	1433
8.1.4. Continuous casting and hot rolling mills . . . . .	1433
8.2. Specific effluents . . . . .	1436
8.2.1. Coke plant ammonia liquor . . . . .	1436
8.2.2. Acidic pickling effluents . . . . .	1436
8.2.3. Effluents from cold rolling processes . . . . .	1437
9. METALLURGY AND HYDROMETALLURGY . . . . .	1439
9.1. Aluminium . . . . .	1439
9.1.1. Alumina production . . . . .	1439
9.1.2. Fluoride-laden water from alumina electrolysis . . . . .	1439
9.1.3. Effluents from baked anode manufacturing . . . . .	1439
9.1.4. Effluents from the washing of cathode carbon lining . . . . .	1439
9.1.5. Aluminium casting and hot rolling . . . . .	1440
9.2. Zinc and lead . . . . .	1440
9.2.1. Roasted blende effluents (GSE) . . . . .	1440
9.2.2. General effluents . . . . .	1440

9.3. Hydrometallurgy (Ur, Au, Cu) .....	1441
9.3.1. Procedure .....	1442
9.3.2. Effluents .....	1444
9.3.3. Sludge dewatering. ....	1444
10. SURFACE TREATMENT .....	1445
10.1. Recycling .....	1445
10.2. Detoxication .....	1445
11. THE AUTOMOBILE AND MECHANICS INDUSTRIES. . .	1450
11.1. Maintenance of aqueous cutting fluid systems .....	1450
11.2. Destruction of cutting fluids .....	1450
11.2.1. Emulsions .....	1450
11.2.2. Semi-synthetic, low hydrocarbon content fluids . . .	1451
11.2.3. Synthetic fluids .....	1452
11.3. Paint booths .....	1452
12. THE FERTILISER INDUSTRY .....	1453
12.1. Production of phosphoric acid and superphosphates .....	1453
12.2. Production of nitrogen fertilisers .....	1454
12.2.1. Ammonia .....	1454
12.2.2. Manufacture of urea .....	1454
12.2.3. Ammonium nitrate .....	1454
12.2.4. Associated production .....	1455
13. THE NUCLEAR INDUSTRY .....	1457
13.1. PWR Nuclear power plants .....	1457
13.1.1. Primary system water .....	1457
13.1.2. Boron recycle system (TEP) .....	1458
13.1.3. Steam generator blowdown system (APG) .....	1458
13.1.4. Reactor cavity .....	1458
13.1.5. Liquid waste treatment system .....	1458
13.2. Retreatment of irradiated combustible materials. ....	1459
