

C

Natural Rubber Science and Technology

Edited by
A. D. ROBERTS

MRPRA

OXFORD SCIENCE PUBLICATIONS

Contents

List of authors

1. A historical perspective of the rubber industry	
1. The 1930s and earlier	3
2. The Second World War	9
3. Post-war recovery	11
4. Post-war growth of synthetic rubbers	13
5. Natural rubber's response to competition	16
6. The oil shocks of the 1970s	19
7. Patterns of change	25
References	28
2. Biosynthesis of rubber	
1. Introduction	35
2. Experimental methods	37
3. Initiation of isopentenyl pyrophosphate polymerization	37
4. Some previous findings with allylic pyrophosphates re-examined	45
5. The synthesis of oligoprenols in suspensions of centrifuged serum solids	47
6. Effect of serum fractions on rubber synthesis with washed rubber particles	49
7. ¹³ C-NMR studies of natural rubber and their relevance to its biosynthesis	51
8. The nature of the rubber synthesized by washed rubber particles and its molecular weight	52
9. Some future directions	56
References	58
3. Latex concentrates: properties and composition	
1. Introduction	63
2. Production of NR latex concentrate	63
3. Composition	66
4. Physico-chemical properties	69
5. Drying	74
6. Destabilization	77
7. Film formation and structure	79

8. Chemical reactions in latex	82
9. Summary	95
References	96
4. Technological processing of natural rubber latex	
1. Introduction	99
2. Latex compounding	100
3. Conversion processes	108
4. Finishing operations	130
5. Future outlook	137
References	137
5. Rheology of raw rubber	
1. Introduction	141
2. Processability	141
3. Characterization of rheological properties	142
4. Stress relaxation	144
5. Rheological theories	149
6. Prediction of response flows	152
7. Factory tests of relaxation behaviour	158
8. Variability of rheological properties	159
9. Influence of molecular characteristics	162
10. Molecular characteristics and microstructure of natural rubber	163
11. Effect of gel and extractable materials	166
12. Concluding remarks	172
References	172
6. Compounding	
1. Introduction	177
2. Sulphur vulcanization	178
3. Non-sulphur vulcanization	190
4. High temperature vulcanization	192
5. Compounding for specific properties	200
6. Engineering with natural rubber	201
7. Durability	208
8. Special requirements	218
9. Processability	226
10. Present and future trends	227
11. Appendix	228
References	229

7. Injection moulding	
1. Introduction	235
2. History of injection moulding	237
3. Product development	239
4. Influence of machine controls	240
5. Compounding natural rubber for injection moulding	249
6. Physical properties of injection moulded vulcanizates	261
7. Powdered rubber technology	266
8. Granulation studies	268
9. Processing with new mixing—extruding machinery	272
10. Summary	278
References	279
8. Compounding for tyres	
1. Introduction	283
2. Aspects of tyre durability	284
3. Winter car tyres	294
4. Medium and heavy duty truck tyres	308
5. Fork lift truck tyres	320
6. Summary	323
References	324
9. Blends of natural rubber with thermoplastics	
1. Introduction	327
2. Preparation of TPNR blends	329
3. Soft blends	331
4. Hard blends	340
5. Potential applications of TPNR blends	354
6. Conclusion	356
References	357
10. Chemical modification of natural rubber	
1. Introduction	359
2. Modification research	360
3. Chemical reactivity of natural rubber	362
4. Simple addition reactions of the olefinic double bond	371
5. Simple substitution reactions of the olefinic double bond	374
6. Electrocyclic reactions	375
7. Degradation reactions	416
8. Epoxidation chemistry	419

9. Properties of ENR	425
10. Applications for ENR	437
11. Conclusion	442
References	443
11. Non-sulphur vulcanization	
1. Introduction	457
2. Peroxide vulcanization	458
3. Urethane vulcanization	468
4. Borane vulcanization	499
5. Conclusion	506
References	507
12. Sulphur vulcanization chemistry	
1. Introduction	511
2. Historical overview	513
3. Structural components of sulphur vulcanizates	515
4. Methods for determining vulcanizate structure	519
5. The general course of accelerated sulphur vulcanization	531
6. Formation of the active sulphurating agent and its reaction with rubber	537
7. Rubber-bound intermediates and their conversion to crosslinks	561
8. Further reactions of crosslinks and pendent groups	568
9. Temperature effects in vulcanization	583
10. Vulcanization of latex films	588
11. Influence of reinforcing fillers on vulcanization	595
12. Conclusion	600
References	601
13. Oxidative ageing	
1. Introduction	621
2. Synopsis of established features of oxidation	621
3. Determination of scission by physical methods	628
4. Determination of scission by chemical methods	633
5. Scission mechanism	647
6. Protection against oxidative ageing	650
7. Rubber-bound antioxidants	653
8. <i>p</i> -Phenylenediamine antidegradants	659
9. Effect of bulk on ageing	667
10. Uses and shortcomings of accelerated ageing tests	670
11. Conclusion	672
References	673

14. Graft copolymers from natural rubber	
1. Introduction	679
2. Thermoplastic rubber	679
3. Grafting chemistry	686
4. Physical properties of the polystyrene graft copolymers	698
5. Grafting to other backbones	708
6. Graft chains other than polystyrene	711
7. Alternative grafting chemistry	725
8. Heveaplus MG and related materials	726
9. Summary	727
References	727
15. Strength properties of rubber	
1. Introduction	731
2. The tear criterion	732
3. Tear behaviour	735
4. Crack growth and fatigue	739
5. Tensile strength and very high strain fatigue	749
6. Theoretical limiting strength for a highly elastic material	757
7. Cutting by sharp objects	763
8. Effect of nature of crosslink on strength	764
9. Other applications of the energetics approach	766
References	768
16. Friction and wear	
1. Rubber friction	773
2. Adhesion phenomena	774
3. Adhesive rolling resistance	778
4. Sliding friction	782
5. Friction on rough surfaces	792
6. The relationship between friction and wear	797
7. Abrasion	798
8. In service prediction	812
9. Future prospects	813
References	815
17. Diffusion of liquids and solids in rubber	
1. Introduction	820
2. Diffusion theory	821
3. Experimental methods	825

4. Diffusion of hydrocarbon liquids and oils	827
5. Blooming of waxes	833
6. Diffusion of water in rubbers	840
7. Practical relevance	849
References	850
18. Low temperature crystallization of natural rubber	
1. Crystallization in natural rubber	853
2. Theories	855
3. Experimental technique	860
4. Tensile strain	863
5. Compression	869
6. Shear	879
7. Crystallization in bridge bearings	880
8. Characterization of engineering vulcanizates	881
9. Summarizing picture	883
References	889
19. Engineering use of natural rubber	
1. Introduction	892
2. Force-deformation behaviour	893
3. Load-deflection characteristics of bonded rubber components	896
4. Dynamic properties	901
5. Transmissibility of rubber components	907
6. Effects on transmissibility due to component design	917
7. Environmental factors	926
8. Flexible rubber-steel laminates	931
9. Conclusion	935
References	935
20. Vibration isolation and earthquake protection of buildings	
1. Introduction	938
2. Mechanics of bearings	938
3. Principles of vibration isolation	939
4. Rubber properties and the design of mounts	940
5. Practical examples of vibration isolation	944
6. Earthquake protection	944
7. Elastomer characteristics	952
8. Design of earthquake bearings	953
9. Implemented base-isolation schemes	954

10. Future prospects	955
11. Conclusions	956
References	956
21. Physical testing and automation	
1. Introduction	958
2. Standard testing	958
3. Improvements to existing equipment	969
4. Newly developed equipment	972
5. Use of computers	982
6. Future	986
References	987
22. Chemical analysis	
1. Analysis of materials of low molar mass	989
2. Polymer analysis in research applications	993
3. Rubber product analysis	1004
4. Blooms and visually similar phenomena	1025
5. Aspects of health and safety	1030
References	1035
23. The evolution of new uses for natural rubber	
1. Historical perspective	1038
2. The market environment	1039
3. Radial ply tyres	1040
4. Producer push or consumer pull	1043
5. Case studies in innovation: novel materials	1046
6. Case studies in innovation: new uses for natural rubber	1055
7. The future	1069
References	1070
Index	1078
