Cosmopoint's edge in link with foreign universities

Seelen Sakran

CONSIDERING its relatively young history, Cosmopoint Institute of Information Technology has done well for itself - especially in coming out with new programmes and links to continually offer internationally recognised education.

In this manner, the college has lined itself with University of New England, Australia and Humber College, Canada in the fields of Information Technology, Multimedia Application and Computer Graphic Design.

This intensive two-year programme is fully accredited and approved by the Malaysian National Accreditation Board.

The Programmes are offered on both part-time and part-time basis to enable students to complete an internationally recognised qualification locally at an affordable cost.

These courses are also designed to equip students with the knowledge, understanding and skills required for success in current and future employment or for progression to an undergraduate degree.

These transferable skills will enable students to meet changing circumstances, whether these arise from a shift in their own sphere of employment, promotion to management roles or from general changes in professional practice or technological advancements.

The qualifications have been developed to meet the needs of students wishing to study Information Technology, Graphic Design, and Multimedia with emphasis either on design or technology.

The courses are designed along the Edexcel Foundation, UK latest curriculum guidelines to introduce state-of-the-art IT tools, and contemporary subjects like JAVA, C++, Authoring Tools, Visual Basic and Multimedia.

The college is well equipped with excellent IT facilities, well stocked library, spacious lecture rooms and dedicated experienced lecturers to conduct these programmes according to international academic standards.

Apart from this link with UNE, Cosmopoint has well established links with other universities in Australia.

Among these are Swinburne University of Technology, James Cook University and University of South Australia.

A new addition in Scotland is Napier University.

Since its establishment in 1991 it has diversified itself in software development, IT consultation, Corporate Training, and education with over 8,000 students in 11 centres nationwide.

Cosmopoint's Multimedia Division is reputed as one of the best in industry having producing two award-winning CD-ROM titles namely "Windows to Malaysia" and "Mahathir: CEO Malaysia Inc."

Its Corporate Training Division has over 200 large government and private organizations as its clients and trains over 10,000 individuals annually.
