HYDRO POWER

in

MALAYSIA

28

TENAGA NASIONAL

FOREWORD

Malaysia has been pursuing the four-fuel strategy using natural gas, hydro, coal and oil for power generation since the global fuel oil crisis in the early seventies. Although hydro stations are not new to this country with a number of very small hydro plants sprouting around Peninsular Malaysia as early as the beginning of this century, greater emphasis was placed on the development of hydro power due to the fluctuating fuel oil prices.

This book, **Hydro Power in Malaysia**, traces the development of hydro projects, big and small, since 1900. It seeks to be a source of useful information to the public, the corporate decision-makers as well as those involved in the implementation of hydro power stations.

It is my hope that this book written for the layman will provide some insight into the social, legal, environmental and technical aspects of the development of hydro power in Malaysia.

Tan Sri Dato' Haji (Dr) Ani bin Arope
Executive Chairman
Tenaga Nasional Berhad
