

# Green mobility, digital transformation advanced

## > PM reaffirms the initiatives reflect Madani govt's commitment to sustainable growth

**KUALA LUMPUR:** Malaysia advanced two major pillars of its national development agenda yesterday - green mobility and digital transformation - as Prime Minister Datuk Seri Anwar Ibrahim reaffirmed the Madani government's commitment to sustainable growth and future-ready public services.

The milestone was marked by the handover of a hydrogen-powered fuel cell electric vehicle from the Science, Technology and Innovation Ministry to the Prime Minister's Department.

The handover represents a significant step in strengthening the nation's push towards green mobility through low-carbon technology and sustainable economic growth.

Anwar said it also demonstrated the

confidence of local and international industry partners in Malaysia's policy direction, especially in developing a national hydrogen ecosystem.

He added that the handover would boost cross-border collaboration and spur automotive innovation across Southeast Asia, *Bernama* reported.

"The Madani government will continue to lead the region's transition towards green and smart mobility to ensure Malaysia is not only prepared for future needs, but also becomes a leader in shaping a cleaner, safer and more sustainable mobility landscape for generations to come."

On the digital front, Anwar announced that the National Digital Economy and Fourth Industrial Revolution Council has agreed to establish a Digital Transformation Unit in every ministry and accelerate the registration process for MyDigital ID.

He said the council also endorsed efforts to advance MyGov Malaysia as a single artificial intelligence-driven digital gateway for government services.

"Priority is also being given to expanding internet coverage and improving service quality at public universities and government

training centres to support continuous digital teaching and learning."

He said the council meeting, which he chaired on Monday, aimed to strengthen public-sector digitalisation under the Madani government's innovation agenda to deliver faster, simpler and more transparent services centred on the public.

To support Malaysia's ambition of becoming a Global Digital Creative Hub by 2030, the government has drawn up the Digital Creative Ecosystem Roadmap 2026-2030, which aims to position the country as a leader in high-quality intellectual property creation and world-class creative talent development.

"These initiatives form the foundation of phase three of the Malaysia Digital Economy Blueprint (2026-2030), which focuses on empowering businesses, improving living standards and driving digital economic reforms.

"The Madani government will remain committed to delivering efficient, people-focused services to ensure Malaysia stays competitive, prosperous and prepared for the rapid changes of the digital era."
