

**NRG Solar, Boeing Break Ground Guam's First Solar Facility**  
**Bernama**  
**5 March, 2014**

KUALA LUMPUR, March 5 (Bernama) -- NRG Energy, Inc, through its wholly owned subsidiary NRG Solar LLC, and The Boeing Company, have started construction on Dandan, Guam's first solar power plant.

Dandan, the 25 megawatt photovoltaic solar installation will supply clean energy to up to 10,000 homes, reduce costly fuel imports, said a statement issued in Inarajan, Guam (US).

NRG will bring its experience and ingenuity as a solar innovator to this project, proven by the company's successful development of solutions ranging from the world's largest solar thermal and photovoltaic facilities to professional sports stadium rooftops to customizable solar canopies.

Boeing will provide its engineering, procurement and construction expertise to the project.

The statement added that the power would be sold to the Guam Power Authority (GPA), the island's sole electric utility, under two 25-year power purchase agreements that would help Guam achieve its renewable energy goals by 2015.

According to the GPA estimates, the project is expected to generate enough clean solar power during the power purchase agreements to realize a total fuel cost savings to GPA of over \$300 million. The clean energy generated will cut annual carbon dioxide emissions by more than 40,000 metric tonnes, the equivalent of taking nearly 7,300 cars off the road.
