

Malaysia working with US to get any satellite information on lost plane
Malaysian Insider
14 March, 2014

Malaysia is working with US investigators to establish if any satellite information can help locate the missing jetliner as the search continues into day seven.

Malaysia is working with US investigators to establish if there is any satellite information that could help locate the missing MH370 jetliner with 239 people on board that has been missing for nearly a week, a senior government official said today.

"They indicated they were studying the possibility of satellite communication. Whatever they have and will share with us," Azharuddin Abdul Rahman, the head of Malaysia's Civil Aviation Authority, told a news conference.

Two sources close to the investigation said on yesterday that satellites picked up faint electronic pulses from Malaysia Airlines Flight 370 after it went missing on Saturday, but the signals gave no information about where the stray jet was heading and little else about its fate. – Reuters, March 14, 2014.
