

Malaysia to use 2 new tools to measure API in 2017
Malaysian Insider
Nov 2, 2015

Malaysia will use two tools to measure particles at 2.5 micron or PM2.5 and read fine-particle levels of less than 10 microns (PM10) for the air pollutant index (API) in 2017.

Natural Resources and Environment Minister Datuk Seri Dr Wan Junaidi Tuanku Jaafar said today: "The use of the two tools will give more effective and accurate API readings."

Wan Junaidi said the ministry was also proposing the use of a measuring tool for river and sea water pollution in the future.

He said the ministry the API reading used at present met international standards. – Bernama, November 2, 2015.
